Product Description

1, Gantry crane

The gantry crane is the most common type of port crane, with a structure similar to a door, hence its name. Portal cranes are divided into two types: box type and cantilever type, commonly used for container loading and unloading, and can also be used for loading and unloading large goods. They can adapt to various working conditions, including indoor and outdoor.

2, Bridge crane

Bridge crane is another common port crane, and its main component is the bridge. Bridge cranes usually use two types: electric cranes and manual cranes, which can lift goods and control the direction of their movement. They are suitable for port loading and unloading, container handling, and so on.

3, Gantry crane

A gantry crane is a type of crane with high flexibility and adaptability, widely used for loading and unloading cargo in ports. The gantry crane can move freely, lift large goods and containers, and also achieve multi-point operations, improving efficiency. In terms of cargo transportation and storage, gantry cranes can also play a role in accelerating the speed of cargo transportation and storage.

4, Dock crane

Dock crane is a type of large crane mainly used for loading, unloading, and stacking goods at ports, ships, and other venues. Its structural feature is the ability to lift items of various shapes and weights, while also having a high level of automation and intelligence.

The above are several common types of port cranes, as well as other types and wide applications. When selecting port cranes, it is necessary to choose according to the actual situation to meet various working conditions and needs.
